

# Energy Performance Certificate

## Address of dwelling and other details

53 DALHOUSIE STREET  
GLASGOW  
G3 6PH

Dwelling type: Basement flat  
Name of approved organisation: RICS  
Membership number: RICS849273  
Date of certificate: 07 February 2012  
Reference number: 0762-1024-4202-9632-1904  
Type of assessment: RdSAP, existing dwelling  
Total floor area: 105 m<sup>2</sup>  
Main type of heating and fuel: Boiler and radiators, mains gas

## This dwelling's performance ratings

This dwelling has been assessed using the RdSAP 2009 methodology. Its performance is rated in terms of the energy use per square metre of floor area, energy efficiency based on fuel costs and environmental impact based on carbon dioxide (CO<sub>2</sub>) emissions. CO<sub>2</sub> is a greenhouse gas that contributes to climate change.

### Energy Efficiency Rating

	Current	Potential
Very energy efficient - lower running costs		
(92 plus) <b>A</b>		
(81-91) <b>B</b>		
(69-80) <b>C</b>		
(55-68) <b>D</b>	62	64
(39-54) <b>E</b>		
(21-38) <b>F</b>		
(1-20) <b>G</b>		
Not energy efficient - higher running costs		
<b>Scotland</b>	EU Directive 2002/91/EC	

### Environmental Impact (CO<sub>2</sub>) Rating

	Current	Potential
Very environmentally friendly - lower CO <sub>2</sub> emissions		
(92 plus) <b>A</b>		
(81-91) <b>B</b>		
(69-80) <b>C</b>		
(55-68) <b>D</b>	58	60
(39-54) <b>E</b>		
(21-38) <b>F</b>		
(1-20) <b>G</b>		
Not environmentally friendly - higher CO <sub>2</sub> emissions		
<b>Scotland</b>	EU Directive 2002/91/EC	

The energy efficiency rating is a measure of the overall efficiency of a home. The higher the rating the more energy efficient the home is and the lower the fuel bills are likely to be.

The environmental impact rating is a measure of a home's impact on the environment in terms of carbon dioxide (CO<sub>2</sub>) emissions. The higher the rating the less impact it has on the environment.

Approximate current energy use per square metre of floor area: 231 kWh/m<sup>2</sup> per year

Approximate current CO<sub>2</sub> emissions: 45 kg/m<sup>2</sup> per year

## Cost effective improvements

Below is a list of lower cost measures that will raise the energy performance of the dwelling to the potential indicated in the tables above. Higher cost measures could also be considered and these are recommended in the attached energy report.

- 1 Upgrade heating controls

*A full energy report is appended to this certificate*

Remember to look for the energy saving recommended logo when buying energy-efficient products. It's a quick and easy way to identify the most energy-efficient products on the market.

Information from this EPC may be given to the Energy Saving Trust to provide advice to householders on financial help available to improve home energy efficiency.

**N.B. THIS CERTIFICATE MUST BE AFFIXED TO THE DWELLING AND NOT BE REMOVED UNLESS IT IS REPLACED WITH AN UPDATED VERSION**

# Energy Report

The Energy Performance Certificate and Energy Report for this dwelling were produced following an energy assessment undertaken by a member of RICS. This is an organisation which has been approved by the Scottish Ministers. The certificate has been produced under the Building (Scotland) Amendment Regulations 2006 and a copy of the certificate and this energy report have been lodged on a national register.

Assessor's name: Paul Reilly  
Company name/trading name: DM Hall  
Address: 14, Newton Place, Glasgow, G3 7PY  
Phone number: 0141 332 8615  
Fax number: 0141 332 4867  
E-mail address: paul.reilly@dmhall.co.uk  
Related party disclosure: No related party

## Estimated energy use, carbon dioxide (CO<sub>2</sub>) emissions and fuel costs of this home

	Current	Potential
Energy use	231 kWh/m <sup>2</sup> per year	219 kWh/m <sup>2</sup> per year
Carbon dioxide emissions	4.7 tonnes per year	4.4 tonnes per year
Lighting	£69 per year	£69 per year
Heating	£769 per year	£724 per year
Hot water	£102 per year	£102 per year

The figures in the table above have been provided to enable prospective buyers and tenants to compare the fuel costs and carbon emissions of one home with another. To enable this comparison the figures have been calculated using standardised running conditions (heating periods, room temperatures, etc.) that are the same for all homes, consequently they are unlikely to match an occupier's actual fuel bills and carbon emissions in practice. The figures do not include the impacts of the fuels used for cooking or running appliances, such as TV, fridge etc.; nor do they reflect the costs associated with service, maintenance or safety inspections. Always check the certificate date because fuel prices can change over time and energy saving recommendations will evolve.

## About the building's performance ratings

The ratings on the certificate provide a measure of the building's overall energy efficiency and its environmental impact, calculated in accordance with a national methodology that takes into account factors such as insulation, heating and hot water systems, ventilation and fuels used.

Not all buildings are used in the same way, so energy ratings use 'standard occupancy' assumptions which may be different from the specific way you use your home.

Buildings that are more energy efficient use less energy, save money and help protect the environment. A building with a rating of 100 would cost almost nothing to heat and light and would cause almost no carbon emissions. The potential ratings in the certificate describe how close this building could get to 100 if all the cost effective recommended improvements were implemented.

## About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The way we use energy in buildings causes emissions of carbon. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions and other buildings produce a further one-sixth.

The average household causes about 6 tonnes of carbon dioxide every year. Adopting the recommendations in this report can reduce emissions and protect the environment. You could reduce emissions even more by switching to renewable energy sources. In addition there are many simple everyday measures that will save money, improve comfort and reduce the impact on the environment. Some examples are given at the end of this report.

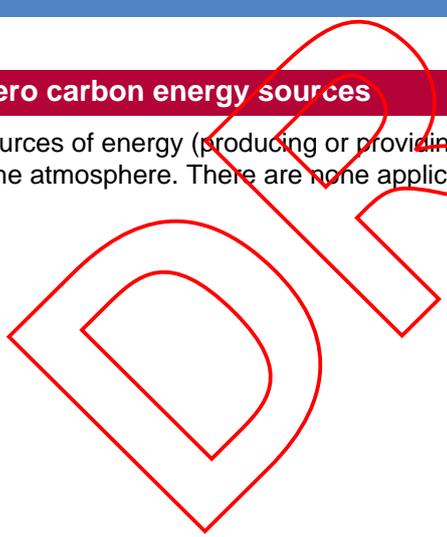

**Summary of this home's energy performance related features**

The table below gives an assessment of the key individual elements that have an impact on this home's energy and environmental performance. Each element is assessed by the national calculation methodology; 1 star = very poor (least efficient), 2 stars = poor, 3 stars = average, 4 stars = good and 5 stars = very good (most efficient). The assessment does not take into consideration the physical condition of any element. 'Assumed' means that the insulation could not be inspected and an assumption has been made in the methodology based on age and type of construction.

Element	Description	Current performance	
		Energy Efficiency	Environmental
Walls	Sandstone, as built, no insulation (assumed)	★ ★ ☆ ☆ ☆	★ ★ ☆ ☆ ☆
Roof	(another dwelling above)	-	-
Floor	Suspended, no insulation (assumed)		-
Windows	Fully double glazed	★ ★ ★ ☆ ☆	★ ★ ★ ☆ ☆
Main heating	Boiler and radiators, mains gas	★ ★ ★ ★ ☆	★ ★ ★ ★ ☆
Main heating controls	Programmer, TRVs and bypass	★ ★ ★ ☆ ☆	★ ★ ★ ☆ ☆
Secondary heating	None		-
Hot water	From main system	★ ★ ★ ★ ☆	★ ★ ★ ★ ☆
Lighting	Low energy lighting in 80% of fixed outlets	★ ★ ★ ★ ★	★ ★ ★ ★ ★
Current energy efficiency rating		D 62	
Current environmental impact (CO <sub>2</sub> ) rating		D 58	

**Low and zero carbon energy sources**

These are sources of energy (producing or providing electricity or hot water) which emit little or no carbon dioxide into the atmosphere. There are none applicable to this home.

### Recommended measures to improve this home's energy performance

The measures below are cost effective. The performance ratings after improvement listed below are cumulative, that is they assume the improvements have been installed in the order that they appear in the table. However you should check the conditions in any covenants, warranties or sale contracts, and whether any legal permissions are required such as a building warrant, planning consent or listed building restrictions. The indicative costs are representative for most properties but may not apply in a particular case.

Lower cost measures	Indicative cost	Typical savings per year	Ratings after improvement	
			Energy efficiency	Environmental impact
1 Upgrade heating controls	£350 - £450	£45	D 64	D 60
Sub-total		£45		
<b>Higher cost measures</b>				
2 Replace boiler with new condensing boiler	£1,500 - £3,500	£82	D 67	D 65
Total		£127		
Potential energy efficiency rating			D 67	
Potential environmental impact (CO <sub>2</sub> ) rating			D 65	

### Further measures to achieve even higher standards

The further measures listed below should be considered in addition to those already specified if aiming for the highest possible standards for this home. Some of these measures may be cost-effective when other building work is being carried out such as an alteration, extension or repair. Also they may become cost-effective in the future depending on changes in technology costs and fuel prices. However you should check the conditions in any covenants, warranties or sale contracts, and whether any legal permissions are required such as a building warrant, planning consent or listed building restrictions. The indicative costs are representative for most properties but may not apply in a particular case.

3 50 mm internal or external wall insulation	£5,500 - £14,500	£120	C 72	C 71
Enhanced energy efficiency rating			C 72	
Enhanced environmental impact (CO <sub>2</sub> ) rating			C 71	

Improvements to the energy efficiency and environmental impact ratings will usually be in step with each other. However, they can sometimes diverge because reduced energy costs are not always accompanied by a reduction in carbon dioxide (CO<sub>2</sub>) emissions.

## About the cost effective measures to improve this home's performance ratings

If you are a tenant, before undertaking any work you should check the terms of your lease and obtain approval from your landlord if the lease either requires it, or makes no express provision for such work.

### Lower cost measures

These measures are relatively inexpensive to install and are worth tackling first. The indicative costs of measures included earlier in this EPC include the costs of professional installation in most cases. Some of them may be installed as DIY projects. DIY is not always straightforward, and sometimes there are health and safety risks, so take advice before carrying out DIY improvements.

#### 1 Heating controls (room thermostat)

The heating system should have a room thermostat to enable the boiler to switch off when no heat is required. A competent heating engineer should be asked to do this work. Insist that the thermostat switches off the boiler as well as the pump and that the thermostatic radiator valve is removed from any radiator in the same room as the thermostat. Building regulations may apply to this work, so it is best to obtain advice from your local authority building standards department and from a qualified heating engineer.

### Higher cost measures

#### 2 New condensing boiler

A condensing boiler is capable of much higher efficiencies than other types of boiler, meaning it will burn less fuel to heat this property. This improvement is most appropriate when the existing central heating boiler needs repair or replacement, but there may be exceptional circumstances making this impractical. Condensing boilers need a drain for the condensate which limits their location; remember this when considering remodelling the room containing the existing boiler even if the latter is to be retained for the time being (for example a kitchen makeover). Building regulations may apply to this work, so it is best to obtain advice from your local authority building standards department and from a qualified heating engineer.

## About the further measures to achieve even higher standards

Further measures that could deliver even higher standards for this home. You should check the conditions in any covenants, planning conditions, warranties or sale contracts before undertaking any of these measures. If you are a tenant, before undertaking any work you should check the terms of your lease and obtain approval from your landlord if the lease either requires it, or makes no express provision for such work.

#### 3 Internal or external wall insulation

Solid wall insulation involves adding a layer of insulation to either the inside or the outside surface of the external walls, which reduces heat loss and lowers fuel bills. As it is more expensive than cavity wall insulation it is only recommended for walls without a cavity, or where for technical reasons a cavity cannot be filled. Internal insulation, known as dry-lining, is where a layer of insulation is fixed to the inside surface of external walls; this type of insulation is best applied when rooms require redecorating and can be installed by a competent DIY enthusiast. External solid wall insulation is the application of an insulant and a weather-protective finish to the outside of the wall. This may improve the look of the home, particularly where existing brickwork or rendering is poor, and will provide long-lasting weather protection. Further information can be obtained from the National Insulation Association ([www.nationalinsulationassociation.org.uk](http://www.nationalinsulationassociation.org.uk)). It should be noted that planning permission might be required and that building standards may apply to this work.

### What can I do today?

Actions that will save money and reduce the impact of your home on the environment include:

- Ensure that you understand the dwelling and how its energy systems are intended to work so as to obtain the maximum benefit in terms of reducing energy use and CO<sub>2</sub> emissions.
- If you have a conservatory or sunroom, avoid heating it in order to use it in cold weather and close doors between the conservatory and dwelling.
- Check that your heating system thermostat is not set too high (in a home, 21°C in the living room is suggested) and use the timer to ensure you only heat the building when necessary.
- Turn off lights when not needed and do not leave appliances on standby. Remember not to leave chargers (e.g. for mobile phones) turned on when you are not using them.
- Close your curtains at night to reduce heat escaping through the windows.
- If you're not filling up the washing machine, tumble dryer or dishwasher, use the half-load or economy programme. Minimise the use of tumble dryers and dry clothes outdoors where possible.
- Check the draught-proofing of windows and replace it if appropriate.
- If you have unused open chimneys consider blocking them off (making provision for a ventilation opening and a cowl on top of the chimney to avoid dampness).

For advice on how to take action and to find out about offers available to help make your home more energy efficient, call 0800 512 012 or visit [www.energysavingtrust.org.uk](http://www.energysavingtrust.org.uk).

## Reduced Data SAP 2009 Input Data Summary

53 DALHOUSIE STREET  
GLASGOW  
G3 6PH

Located in: Scotland  
Date of assessment: 06 February 2012  
Date of certificate: 07 February 2012  
UPRN: 1002413942  
Reference number: 0762-1024-4202-9632-1904

### Country and Language

Scotland , ENGLISH  
Note: Includes energy report. Includes cost ratings.

### Property Overview

Dwelling type:	Flat	Main property age:	Before 1919
Built form:	End Terrace	Perimeters and areas:	Internal
Habitable rooms:	4		
Heated habitable rooms:	4		
Terrain type:	Dense Urban		
Transaction type:	Marketed Sale		
Basis of certificate:	Full survey by you		
Sampling approach:	None (full survey)		
Visited property:	Yes		
Related party disclosure:	No related party		

### Main property construction

Lowest floor	area = 105.15	room height = 2.48	perimeter = 44.84
Wall construction	Sandstone with insulation as built		
Roof construction	Dwelling above, not defined		
Ground floor	Suspended Timber, as built		

### Windows

Area of windows:	Typical
Multiple glazing:	100% installed before 2003
Measured windows:	None

### Conservatory

There is no conservatory

### Shelter factors (flats and maisonettes only)

Floor number:	0	Flat corridor:	Unheated
Flat level:	Basement	Sheltered wall length:	15.02 m

### Space heating and controls

Database Reference No: 008053 - Vokera Linea 28: gas:combi:non-condensing:wall mount:BF:fan:no pilot:fuel=1

Main heating fuel:	-
Heat emitter:	Radiators
Boiler flue type:	Balanced flue
Boiler fan type:	Fan assisted
Main heating controls:	2107 - BOILER SYSTEM WITH RADIATORS OR UNDERFLOOR HEATING, Programmer, TRVs and bypass
Secondary heating:	-
Secondary heating fuel:	-

## Water heating and cylinder

Water heating: 901 - From main heating system  
Water heating fuel: 1 - Gas, mains gas  
Solar panel: No  
Cylinder present: No  
Immersion type: -

## Photovoltaic cells

None

## Miscellaneous

Open fireplaces: 1  
Ventilation type: Natural  
Electricity meter: Single  
Wind turbines: 0  
Standard light outlets: 2  
Low energy lights: 8 (80%)  
Main gas supply: Yes

## Measures

Selected:  
Heating controls for wet central heating system (G)  
Upgrade boiler, same fuel (I)  
Solid wall insulation (Q)

Cancelled:

## Addenda

None selected
